

Backboard Pad - Pressure Test Results

Morrison Medical offers a full line of pressure relief backboard pads. With both disposable and premium reusable options, you can greatly reduce pain and discomfort associated with patient transport on a backboard with the option that best fits your needs and budget.

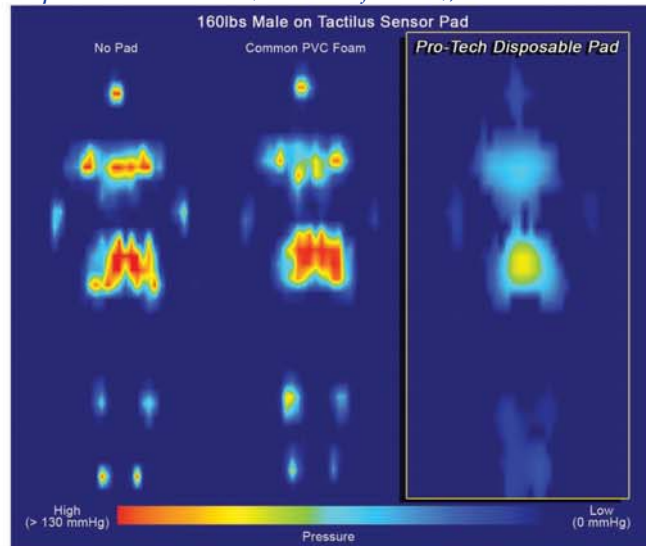

Our backboard pads have been proven to outperform other competitive products on the market. See for yourself – below are three pressure studies that tested the pressure experienced with the use of different backboard pad options.

Each test series below illustrates the pressure readings derived from a 160 pound subject lying with no pad, a competing pad, and our pad material.

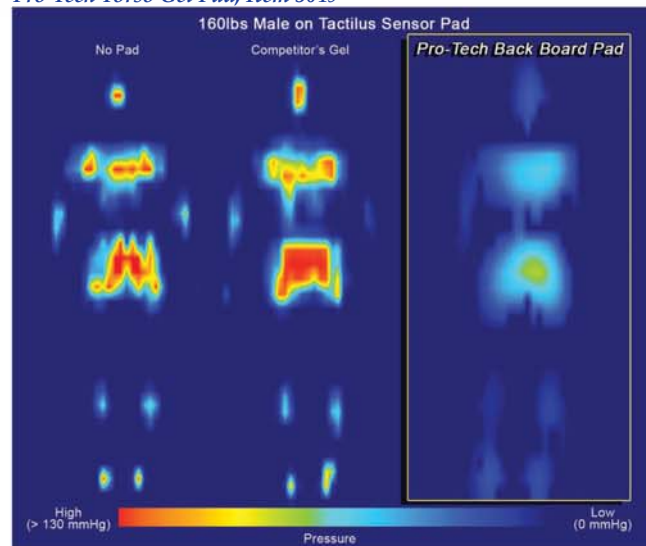

Pro-Tech Full Body Gel Pad, Item 3049

Disposable Pressure Pad (with cover for reuse), Item 3041

Pro-Tech Torso Gel Pad, Item 3049

RESULTS:

Each test series resulted in our pad outperforming the competition, hands-down. All pads offered by Morrison Medical were proven to be successful in dispersing pressure and reducing the overall pressure experienced by the subject. The reduction was more than sufficient in alleviating excessive pressure which can result in pressure sores under a typical rescue operation or hospital setting.
